John L. Falconer is the Mel and Virginia Clark Professor and a President's Teaching Scholar (the University's highest teaching recognition) at the University of Colorado Boulder. He received his B.S. in Chemical Engineering from Johns Hopkins University in 1967, and his Ph.D. in Chemical Engineering from Stanford University in 1974. He spent two years in the U.S. Army part-way through his graduate studies. Following a postdoctoral year at SRI International, he joined the University of Colorado. His research interests are in inorganic membranes and heterogeneous catalysis, and he has published more than 230 journal articles and he has 20 patents. He has also published 11 articles in *Chemical Engineering Education*, and he has led the effort to develop chemical engineering educational resources that are available on www.LearnChemE.com. These include more than 1,600 ConcepTests, 1,300 screencasts, 100 interactive simulations, and course packages for two courses. He has received the Chemical Manufacturers Association National Catalyst Award for Excellence in Teaching (1997), the AIChE Warren K. Lewis Award for Chemical Engineering Education (2015), and the AIChE David Himmelblau Award for Innovations in Computer-Based Chemical Engineering Education (2015). He is a Fellow of the AIChE. He received the Hazel Barnes Prize from the University of Colorado in 2008; this is the highest faculty recognition for teaching and research given by the University.
